The percentage of the components

pH in 1% Solution = 4-5

Main elements	
The element	Conc./amount (w/w)
Potassium oxide	30%
Fulvic acids	25%

Features: Potassium fertilizer with fulvic acids.

Potassium fertilizer indicated to apply during the fruit growth phases. It is recommended to apply during the fruiting phase to improve the fattening process, since it favors the increase in size and the uniformity of the fruits.

Foliar & Root application
